ROBERT R. NEWTON is a research physicist in the central office of the Space Department. Born in Chattanooga in 1918, he received his Ph.D. in physics in 1946 at Ohio State University. After two years with Bell Telephone Laboratories and a career in teaching physics at the University of Tennessee and at Tulane University, he joined APL in 1957, devoting his time to the study of the mechanics of flight of satellites and interplanetary spacecraft. Dr. Newton’s recent interests deal with the discovery and use of ancient astronomical measurements to study the behavior of nongravitational forces within the solar system. Several books and articles have resulted from this study. He was supervisor of the Space Physics Branch from its founding until July 1983.

WILLIAM B. McCLOSKEY, JR., was born in Baltimore in 1928, received his B.S. degree from Columbia University in 1951, and served until 1953 with the U.S. Coast Guard in Alaska. After working for the Baltimore Sun, the U.S. Information Agency in Madras, and in industrial public relations, he joined APL’s External Relations Group in 1962. His responsibilities include federal liaison in Washington. As a freelance writer and photographer appearing in several national and international publications, he has become increasingly identified with issues involving the water—commercial fishing, marine mammal hunting and protection, ocean politics, and marine environment. His most recent book, Highliners (McGraw Hill, 1979), is a novel about Alaskan fishermen.

AUTHOR INDEX
Johns Hopkins APL Technical Digest
Volumes 1 through 5
(1980-1984)
